My name is Andreas Bye and for the last four years I have worked as a project manager for the Norwegian EDI-provider Logiq AS which is one of Norway's top three biggest Peppol accesspoints based on transaction volume. Besides being a project manager, I also hold the position as leader of the company's internal Peppol-forum.

As a project manager I continuously work with new customers and gain first-hand insight on the implementation process which customers and access points go through when implementing in- and outbound Peppol integrations for various Peppol-formats.

As the leader of Logiq's internal Peppol-forum I also gain insight in all sorts of issues and questions raised regarding Peppol by our customers, servicedesk, sales department, developers, and management.

Besides everything I do internally at Logiq I am also the company's representative outwards in all Peppol-related contexts. In 2019 I attended the OpenPeppol Exchange Summit in Brussel and have since then had to follow the subsequent events online as everyone else. I also represent Logiq in various Service Provider Community meetings, both on national and international level.

During my years at Logiq I have also worked on different EDI-projects and had various positions and responsibilities not directly related to Peppol. For example, since 2018 I have worked with the Swedish organization BEAst and its Norwegian sister organization Virke. During this time, I have been involved in the creation of four versions of a series of XML-formats called the BEAst-standard made specifically for the builder's industry. I also represent Logiq in the Swedish EDI-network called NEA and I am Logiq's internal specialist on the Finnish and Danish networks called Tieke and NemHandel.

I submitted my candidacy for this same position in last year's election and my motivation for becoming a part of the Post-Award CMB has not changed since then; I want to learn and develop. As I already hold the overall responsibility and expertise on Peppol at Logiq I feel like becoming a part of OpenPeppol is the natural next step for me. It would be a new experience for me to be part of a decision-making processes in an international organization, to collaborate, discuss and learn from highly experienced and merited persons from other countries, and to dig deep into the different issues raised to the CMB – it would without a doubt be both educational and exiting for a person at my stage of the career life.

Sincerely,

Andreas Bye
