

Peppol

The future is open

# Peppol Service Provider Community Meeting

February 14th 2023

[www.peppol.org](http://www.peppol.org)

Peppol is owned by OpenPeppol AISBL

# Agenda

1. MC News
2. Market News
3. News from eDec community
  - AS2 phase out
  - Codelist update
4. News from PoAcc community
  - May release webinar summary
5. Advanced Ordering - Release of the new BIS set
6. Operational plan of SPC for 2023
7. AoB

# MC News

Membership as end of 2022

## Key membership indicators

---

18

Countries with  
Peppol Authorities

42

Countries with  
OpenPeppol members

497

Total number of  
OpenPeppol members

# Membership Status – 2022

---

- The final numbers for 2022 are slightly better than the worst scenario presented
- Global Growth
  - Annual Growth lower than last year
    - 2021: 5,76% - 26 new members, 2022: 4,19% - 20 new members
  - 3 new countries (India, Latvia, Malaysia), 1 lost (Hungary)
  - 2 new countries with Certified Service Providers (Japan, Latvia), 1 lost (Hungary)
- Growth in countries
  - Japan was the main source of growth (7) – Luxembourg (5) and UK (4) coming right after
  - Norway is the biggest country in number of total members (60), followed by Italy (58)
  - Negative growth for Singapore (-4), Australia, Germany, The Netherlands and Sweden (-3)
- Member acquisition trends
  - Number of MAF requests has decreased in 2022
    - 2020: 160 requests, 2021: 127 requests, 2022: 116 requests
- Peppol Network Growth
  - Increasing - 741.820 receivers on 9 December 2022 (602.832 on 15 November 2021)

# Membership Status – 31.12.2022

| Category                     | End 2021       | End 2022       | Net Growth | % YTD | 2021 Growth |      |
|------------------------------|----------------|----------------|------------|-------|-------------|------|
|                              |                |                |            |       | Net         | %    |
| Total Number of Members      | 477            | 497            | 20         | 4,2%  | 26          | 5,8% |
| Certified APs                | 334<br>(+1 EC) | 334<br>(+1 EC) | 0          | 0%    | 29          | 10%  |
| Countries with Members       | 40             | 42             | 2          | 5%    | 3           | 8%   |
| Countries with Certified APs | 35             | 36             | 1          | 3%    | 5           | 17%  |
| Peppol Authorities           | 17             | 18             | 1          | 6%    | 2           | 13%  |
| Post-Award Providers         | 434            | 452            | 18         | 4%    | 24          | 6%   |
| ACL Providers                | 197            | 232            | 35         | 18%   | 30          | 18%  |
| Pre-Award Providers          | 15             | 13             | -2         | -13%  | -1          | -6%  |
| End Users                    | 15             | 12             | -3         | -20%  | -1          | -6%  |
| Observers                    | 11             | 15             | 4          | 36%   | 2           | 22%  |

# Net Yearly Growth in Membership

# Membership Evolution in and beyond Europe

European

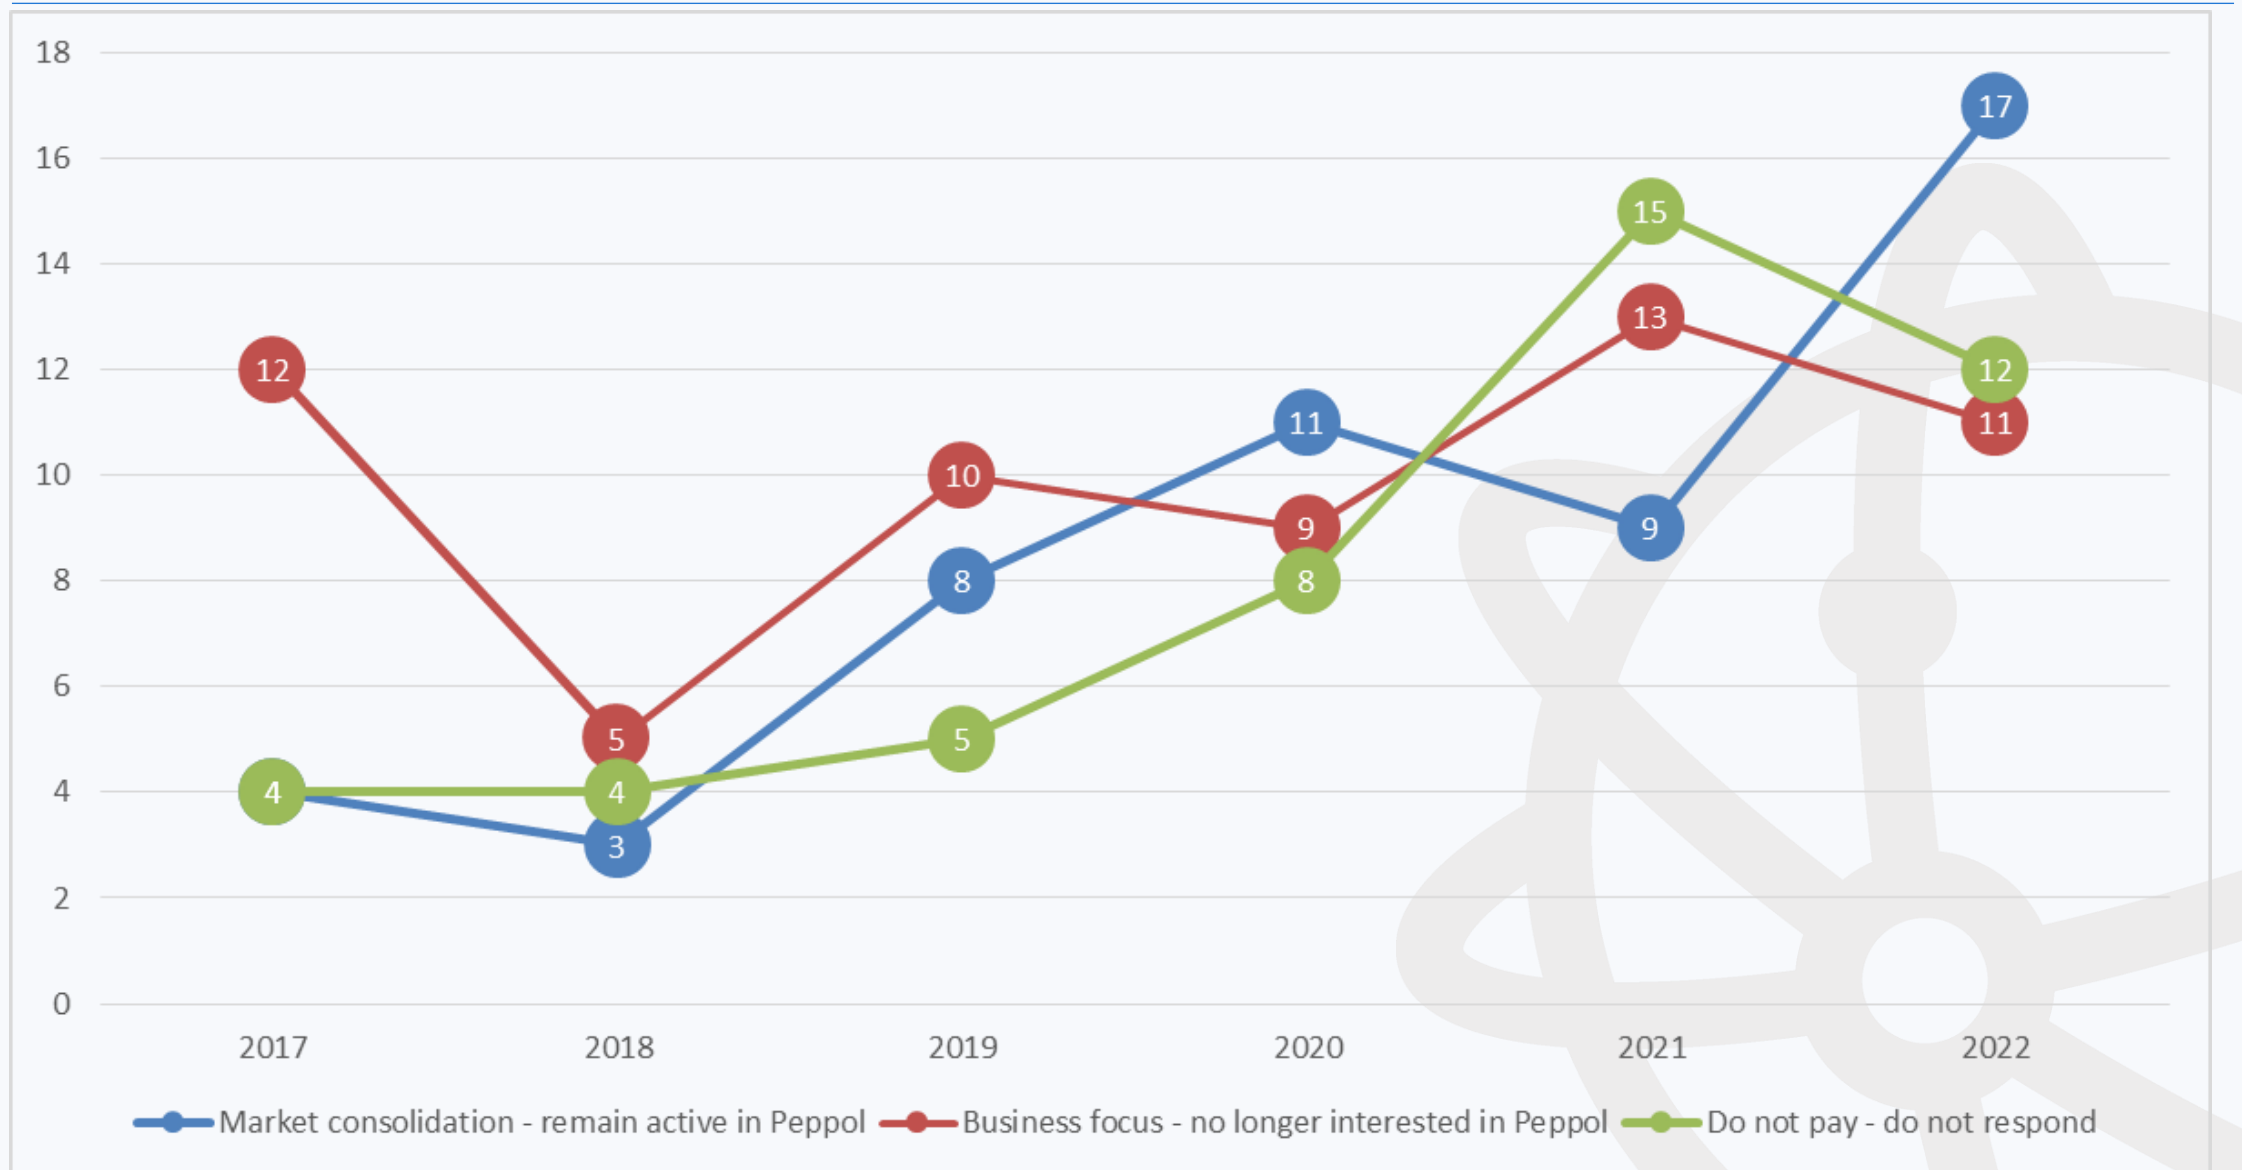

Non-European

# Peppol Network Growth

# Outgoing Members per off-boarding categories

# MC Descision

- 
1. Approve in principle the participation of OpenPeppol in the DCC GIE as an Associate Member, subject to the outcome of a legal review of their Statutes and Internal Regulations.
  2. Delegate to the Operating Office to perform a legal review of DCC GIE Statutes and Internal Regulations when available. If no substantial negative findings are made, the Operating Office are given the power to formalise the participation of OpenPeppol in the DCC GIE as an Associate Member.
  3. Offer the possibility of OpenPeppol Observer membership to DCC GIE.

# What is DCC (Data Conformity Chain)

---

- Initiative promoted by Infocert – a French IT company specializing in the certification of software products
- Business objective – to provide an end-to-end invoice traceability and QA service along the complex landscape of the French eInvoicing and eReporting landscape
- Relevance to Peppol – same view of the ecosystem
  - They advocate against concentrating flows through the public platform and strongly support decentralization on grounds of GA and public platform burden
  - they are very supportive and promote the use of Peppol whenever possible between relevant actors, including communication with the public platform
- Relevance in the French market
  - They have a target group of many software providers who are already their customers
  - Well positioned to provide QA and certification services for the French ecosystem

# What is the DCC GIE and why participate

---

- An Economic Interest Group, established as a non-profit Association under French law. It is very similar to a Belgian AISBL in its purposes and functions.
  - It is a legal form that makes it acceptable for interest groups to liaise directly with the French government and public authorities in general
  - The purpose of the DCC GIE is to gather under one roof the French stakeholders interested in participating to the DCC initiative and talk to the government under that umbrella
  - Since the DCC initiative is helping advance the objectives of OpenPeppol in France, it will be an advantage to participate and give them incentives to promote Peppol in France
  - In order to avoid too close identification with the traceability agenda of DCC, which can be controversial in Peppol, the proposal is for OpenPeppol to become a non-voting Associate Member of the DCC GIE. Accordingly, OpenPeppol can offer them Observer membership.
1. **MC173 Decision Brief** posted on Confluence and circulated 18 January as v0.1. The [final version](#) posted 23 January

# Market News

# Market development update (1/2)

---

- **Potential Peppol Authorities**

- United Arab Emirates

- regular technical dialogue with Deloitte who are advising UAE
- F2F meetings expected with Deloitte and UAE officials at the Dubai Exchange Summit

- Luxembourg

- re-confirmed intention to become a Peppol Authority in 2023

- South Korea

- SK government requested Peppol Authority information pack via KTNET (follows briefing call in Oct-22 and UNESCAP webinar in Nov-22)

- Malaysia

- no further news since December Exchange Summit, update requested

# Market development update (2/2)

---

- France
  - PoC resumes with new FNFE sub-group meeting
  - 3 new SP from France joined OpenPeppol for the PoC – a few more in the pipeline
  - A more complete modelling of regulated and non-regulated flows in progress, including connection to C5
  - A separate testing group composed of members to be established in parallel to FNFE
  - Dialogue with government authorities actively sought

## News from eDec community

AS2 Phase out  
Codelist update

# Agenda items

---

- AS2 removal
- Code List Updates
  - POAC and eDEC Codes list alignment
  - v8.3.1 codes list release
  - Update on Code List Statuses

# AS2 removal

---

- MC decided that AS2 must be completely removed from the Peppol network
- AS2 was a transport protocol previously mandatory in the Peppol Network
- The AS4 protocol has been mandatory in the Peppol network since February 1st, 2020
- → All Peppol SP must make sure, that the AS2 protocol is no longer used in the Peppol Network
- Timeline:
  - A guideline was created that takes effect immediately (because an MC decision)
  - Peppol SPs can start immediately to remove the remainders of Peppol AS2 in their systems
  - The complete process must be finished within the next 6 months
  - Additional guidance and details will be published and communicated

# AS2 removal (details)

---

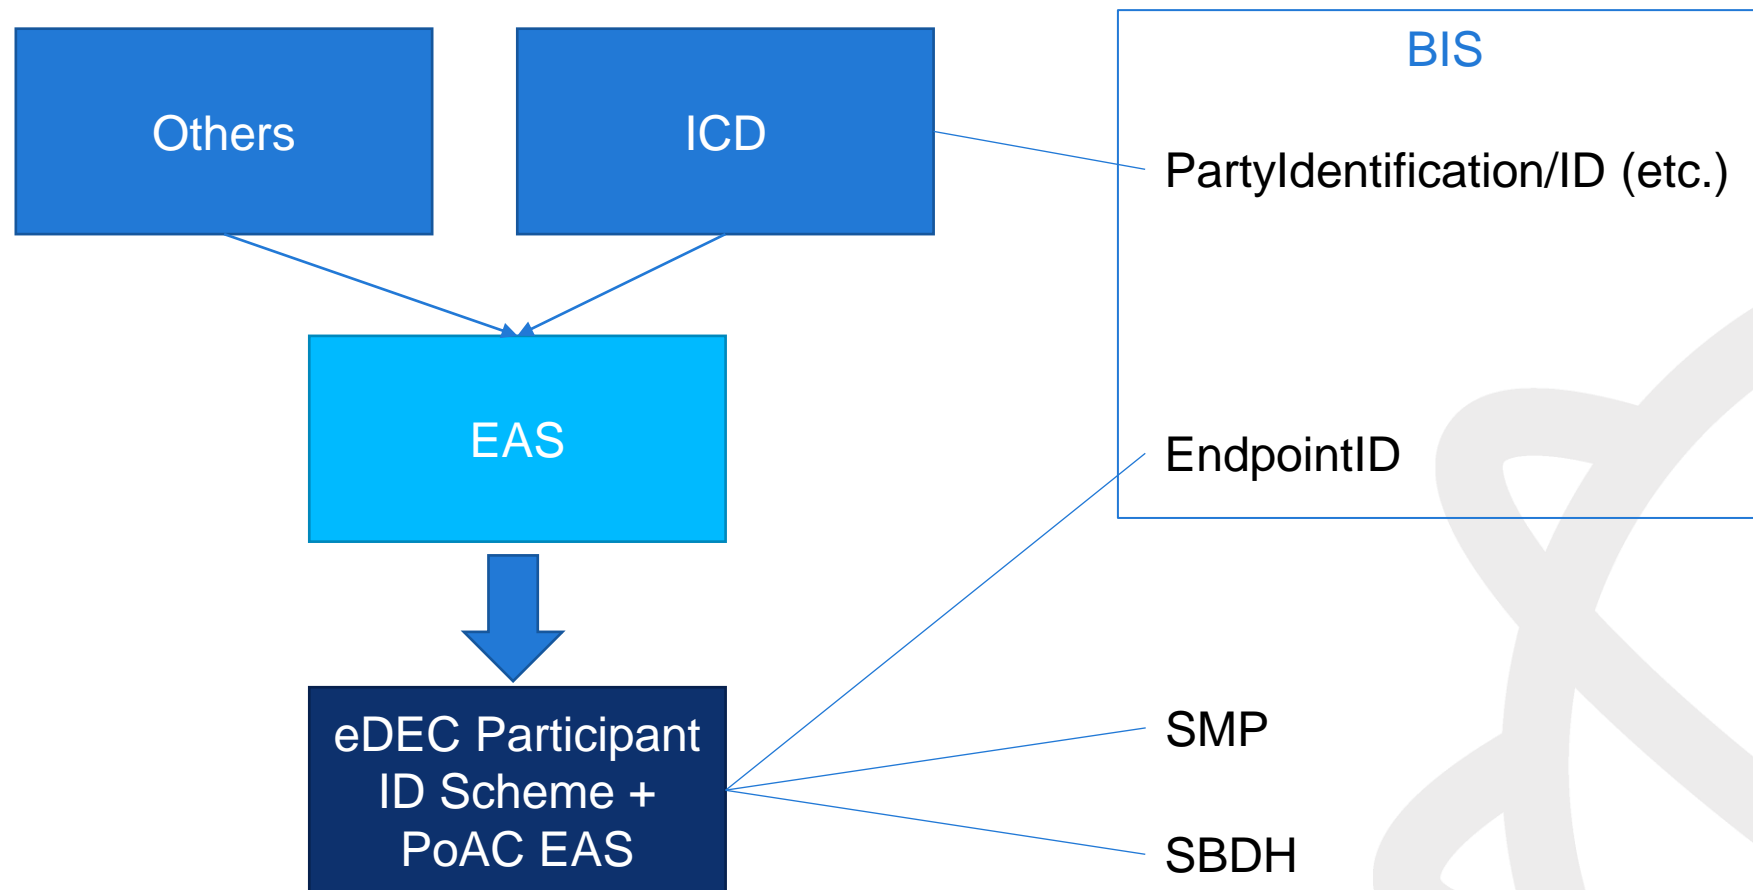

- Tasks for Peppol Capability Lookup (SMP) Providers:
  - Remove all SMP endpoints from all participants that use the transport profile `busdox-transport-as2-ver1p0` (Peppol AS2 1.0) or `busdox-transport-as2-ver2p0` (Peppol AS2 2.0)
    - Only SMP endpoints using the transport profile `peppol-transport-as4-v2_0` should remain
  - Make sure, that in the future no SMP endpoint uses any of the AS2 transport profiles anymore
- Tasks for Peppol Access Point (AP) Providers:
  - Make sure to not use the AS2 protocol while using the Peppol Network
  - Make sure to stop receiving AS2 messages while using the Peppol Network
- SMP lookups must only search for the AS4 protocol. Fallbacks to AS2 must be removed
- Additional information:
  - Peppol SPs don't need to inform OpenPeppol about their progress. OpenPeppol will run respective scans automatically to see which SMP endpoints are still existing
  - The support of AS2 will be removed from the Peppol Testbed 1.0 shortly

# Code List Updates

---

- Centralized Code List Management for PoAC and eDEC agreed
  - If a change is needed this always goes via eDEC, as the CMB that is responsible and maintains the code lists
  - Participant Identifier Schemes needs alignment between PoAC and eDEC
  - eDEC will be in charge of the eDEC Participant Identifier Scheme code list that corresponds to the EAS Code List for PoAC BIS Billing
  - The discrepancies between PoAC November 2022 release and latest eDEC Release 8.3.1 will be resolved between PoAC and eDEC immediately
  - PoAC uses two code lists: ICD and EAS - this affects only the PoAC “EAS” code list

# Code List Updates – Target state

# Code List Updates

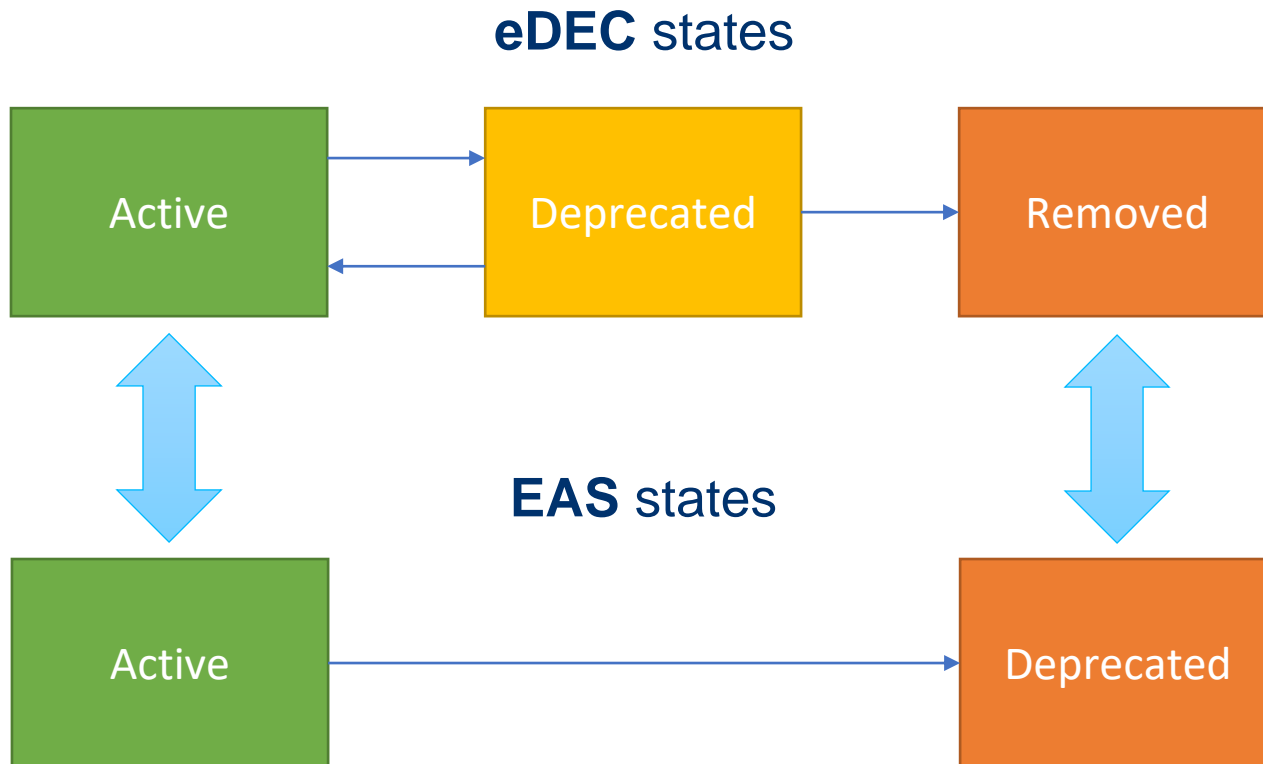

---

- OpenPeppol eDelivery Change Management Board (eDEC CMB) is happy to announce the release of Peppol Code Lists version v8.3.1
    - For Document Types, Processes, Participant Identifier Schemes and Transport Profiles
    - 8.3.1 because one correction compared to 8.3 release
  - Published at <https://docs.peppol.eu/edelivery/codelists> (as usual)
  - Added and deprecated Participant Identifier Schemes
  - Added and deprecated Document Type identifiers
  - Details as usual at: <https://docs.peppol.eu/edelivery/codelists/changelog.html>
- ➔ v8.4.0 coming up soon with AS2 changes etc.

# Code List Statuses

Quick reminder for Code List requestors

**Deprecated** means: continue to use, but don't add anything new

**Removed** means: remove all existing occurrences

**Deprecated** means: remove all existing occurrences

## News from PoAcc community

May release webinar summary

- 
- <https://openpeppol.atlassian.net/wiki/spaces/PoACC/pages/3027271681/POAC+RFC+Webinar+2023-02-12>

# Advanced Ordering

# The prologue for Advanced Ordering

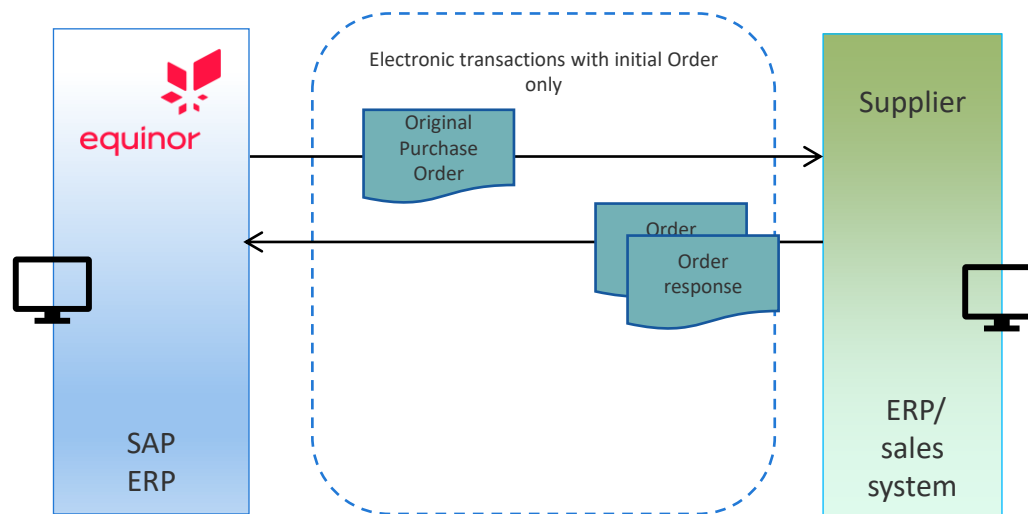

---

- Advanced Ordering is the first «global» BIS in Peppol based upon a request from a member in the End User Community (Equinor)
- After Equinor implemented Ordering in 2016 it became obvious quite early that the suppliers wanted a “lifecycle” approach on the ordering orchestration within the B2B area, and the first moves towards a request for a “Advanced Ordering” started in fall of 2017
- Initially the PoAcc CMB was not that positive towards a BIS for Advanced Ordering, but the Norwegian PA supported the development for a national use of “EHF Advanced Ordering” that have been in production since spring 2019
- Since Equinor has an international presence, it was natural to push further with an international mindset and initiated another RFC for a Peppol BIS Advanced Ordering in spring 2021

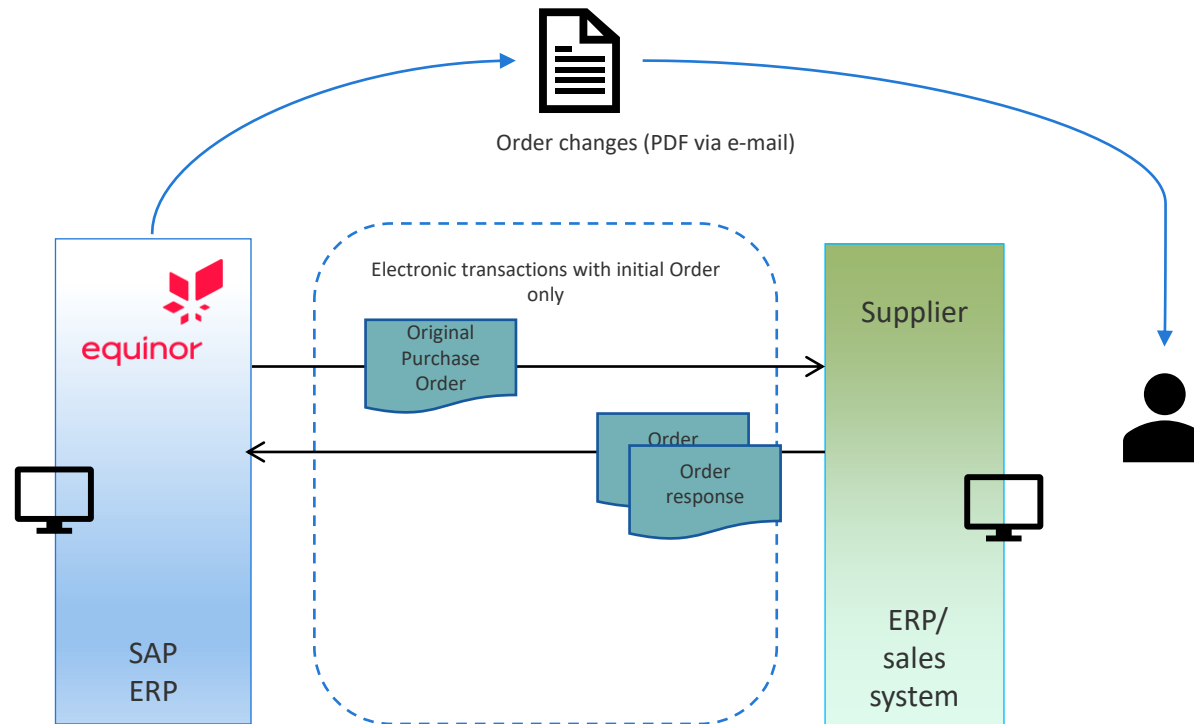

# Equinor experience with “Advanced Ordering”

# The “original” Peppol BIS Ordering

- Just sending the initial order works well with majority of the material procurement

# The “original” Peppol Ordering with changes

- For service procurement and some material procurement, there are typically several changes to the purchase order during its lifecycle
- Just having the initial order digitally and handling the changes manually was not an optimal way of working

# Equinor and our suppliers needed a fully digital alternative

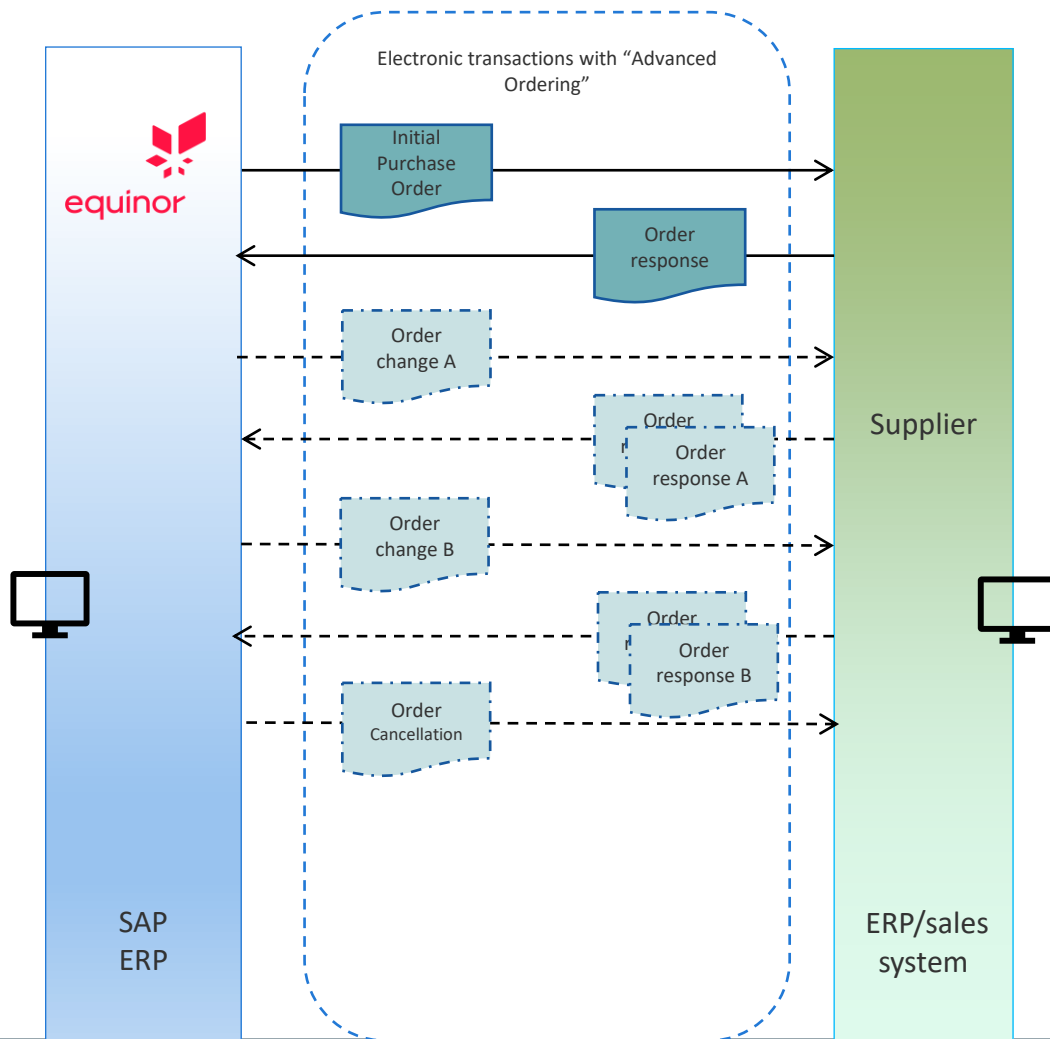

- The way our business operates in our SAP ERP environment, we typically have a lot of adjustments on the purchase orders, especially for services.
- Several of our suppliers wanted a fully digital interaction for handling of all the changes
- We had the Danish IOI UBL specifications for “Advanced Ordering” as a starting idea
- The CEN/TC 440/WG 6 «e-Ordering» has also identified «Advanced Ordering» as one of the proposed variants for «e-Ordering»

# The EHF Advanced Ordering «incubation\*» project

- \* DFØ - The Norwegian Peppol Authority established a project during 2019-2020 with participation from: («incubation» with the intention to be a Peppol BIS specification)
  - «Buyer» - Equinor
  - «Suppliers» - Aibel and Baker Hughes
  - «Service providers/Access Points» - Pagero and TietoEvry
- DFØ prepared:
  - the use cases
  - hosted and coordinated the workshops
  - prepared the foundation with the pilot specifications
  - Prepared the ability to use ELMA\*\* test and ELMA\*\* production
  - «Pilot specifications» starting Aug 2019 with a handful participants in production
  - Final specifications EHF Advanced Ordering v3 starting Mar 2020

\*\*ELMA is a Norwegian SMP operated by DIGDIR

# Advanced Ordering

- Having the Advanced ordering we can enable a fully digital interaction.
- Changes to an Order can be triggered based upon a conditionally accepted Order Response, expansion of scope etc
- With the exception of the "ProfileID", the initial Order in "Advanced Ordering" is identical to the initial Order in "Peppol BIS Ordering"

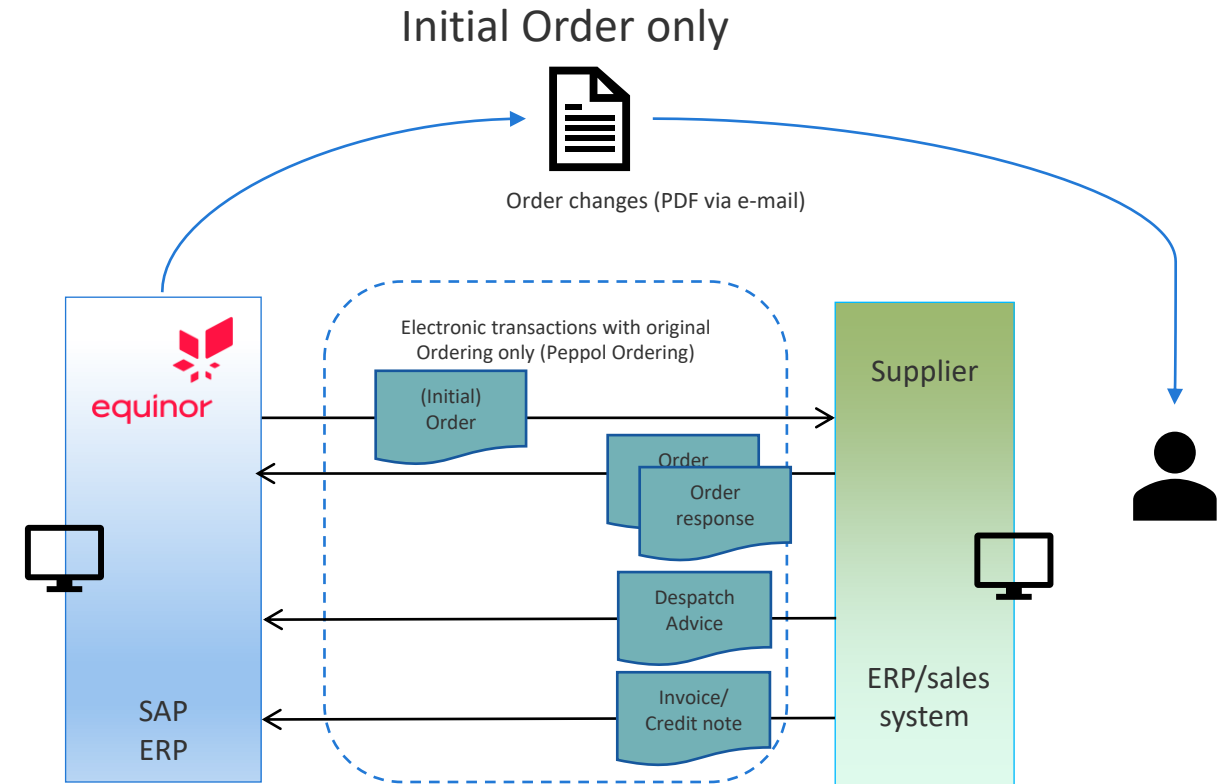

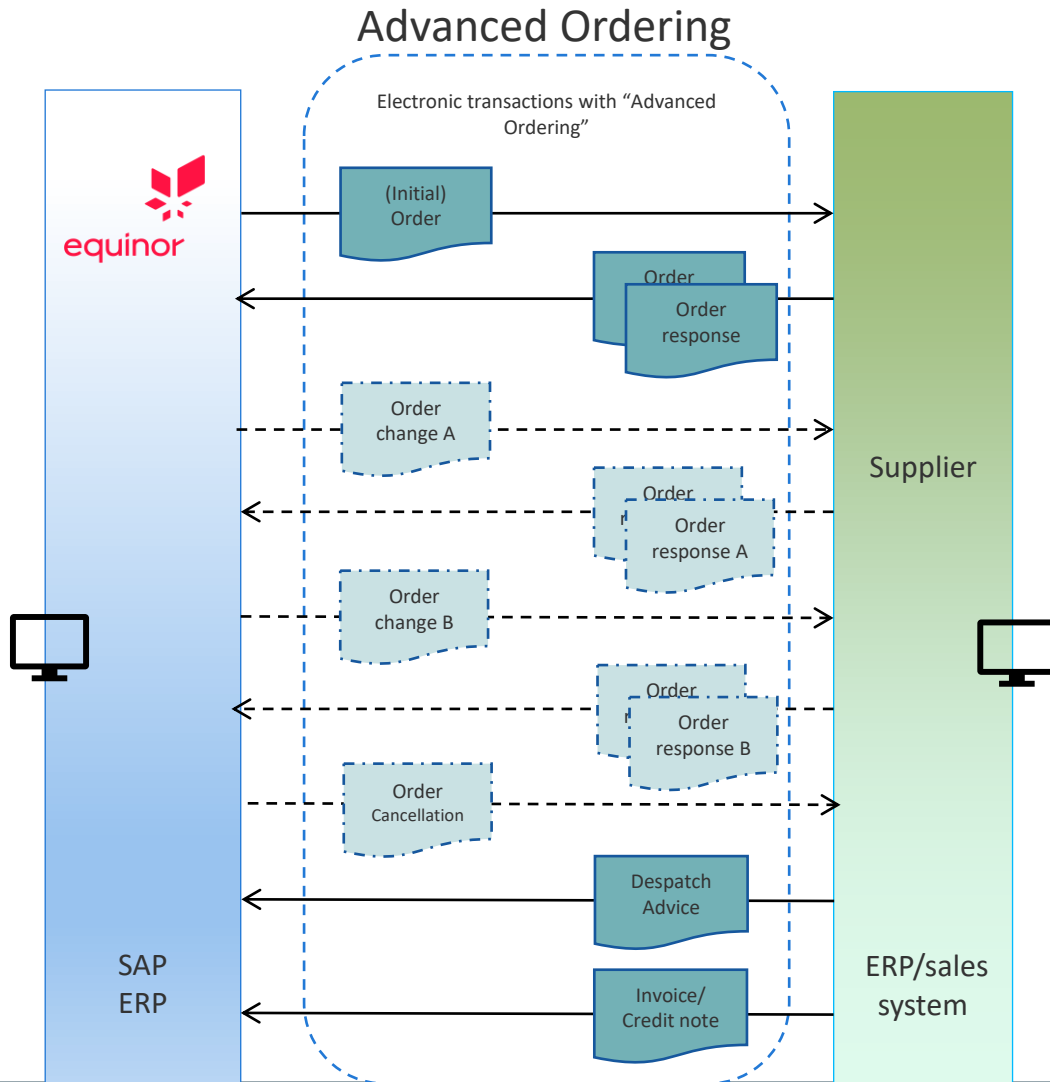

# Learnings from the implementation and development

- Each Order Change must be a self-contained, complete Order (not just a delta from the previous version)
- The «Advanced» part for the supplier is to find a good way to track down the changes (added, modified, deleted order lines) and respond with an Order Respons where they accept or reject each version of the Order Change or conditionally accept individual order lines for each version
- The «Advanced» part for the buyer is to find a good way to track down the Order Responses for each version of an Order Change
- The suppliers that are able to handle the Order Changes in a good way are very satisfied with Advanced Ordering
- Scenarios where Advanced Ordering can't be used:
  - Some suppliers have a sales system that creates a sales order automatically for each eOrder they receive regardless of this is the initial order or an order change. This requires all Order Changes to be updated manually
  - Some suppliers have an ERP/sales system that is not capable of receiving changes automatically. This requires all Order Changes to be updated manually

# Development of Peppol BIS Advanced Ordering 3

- RFC sent in spring 2021
- Mandate given by PoAC CMB in September 2021:
  - Develop a new BIS for Advanced Ordering as part of Post-Award
  - The new BIS should extend the existing BIS Ordering with two new transactions:
    - Order Change
    - Order Cancellation
- Project group established Nov 2021 and was working until early autumn 2022
  - The EHF Advanced Ordering was used as a starting template
  - Participation from a wide specter of groups
  - System test were not part of the project work
- OO Declared official production ready from 23 Jan 2023

# eOrder: Advanced Ordering vs Original Order only

Initial Order only:

- Typical: suppliers that creates a sales order automatically for each eOrder they receive regardless of this is the initial order or an order change.
- OR – their sales system is not capable of receiving changes automatically and must be manually updated

# Special notes for BIS Advanced Ordering vs EHF Advanced Ordering

---

- BIS:
  - Order 3.x is reused (incl UBL 2.1) but new transactions are based on UBL 2.3
    - Order Change
    - Order Cancellation
    - Order Response Advanced
- EHF
  - All transactions are based upon UBL 2.2
  - Order Initiaton is a separate document (but actually only CustomizationID and ProfileID is different from Order transaction)
- SMP registration for both:
  - EO - Economic Operator (seller) need to register for Advanced Ordering: Order, Order Change and Order Cancellation
  - CA – Contracting Authority (buyer) need to register for Advanced Ordering: Order Response

# Main differences between Peppol BIS and EHF Advanced Ordering

## ProfileID + CustomizationID

- Peppol BIS

| Type                           | Element cbc:CustomizationID                            | Element cbc:ProfileID                           |
|--------------------------------|--|---|
| Order (T01)                    | urn:fdc:peppol.eu:poacc:trns:order:3                   | urn:fdc:peppol.eu:poacc:bis:advanced_ordering:3 |
| Order response advanced (T116) | urn:fdc:peppol.eu:poacc:trns:order_response_advanced:3 |   |
| Order change (T114)            | urn:fdc:peppol.eu:poacc:trns:order:3                   |   |
| Order cancellation (T115)      | urn:fdc:peppol.eu:poacc:trns:order_cancellation:3      |   |

- EHF

| Type                    | Element cbc:CustomizationID  | Element cbc:ProfileID                                |
|-------------------------|--|--|
| Order Initiation        | urn:fdc:peppol.eu:poacc:trns:order:3:extended:urn:fdc:anskaffelser.no:2019:ehf:spec:3.0          | urn:fdc:anskaffelser.no:2019:ehf:postaward:g3:09:1.0 |
| Order response advanced | urn:fdc:peppol.eu:poacc:trns:order_response:3:extended:urn:fdc:anskaffelser.no:2019:ehf:spec:3.0 |  |
| Order change            | urn:fdc:anskaffelser.no:2019:ehf:spec:adv-order-change:3.0                                       |  |
| Order cancellation      | urn:fdc:anskaffelser.no:2019:ehf:spec:adv-order-cancellation:3.0                                 |  |

# What is the difference between EHF and Peppol BIS?

- Typically the EHF is based upon Peppol BIS specifications and use the Peppol eDelivery infrastructure
- Peppol BIS messages can in theory be used internationally
- EHF messages can typically only be used in Norway
- Even if for example an EHF Order 3.x and Peppol BIS Order 3.x have the same business content, the EHF Order can only be used within Norway, while a Peppol BIS Order can be used internationally and within Norway

- EHF = Elektronisk Handelsformat. Both sender and receiver must have a Norwegian company registration number (see [brreg.no](http://brreg.no))

# Operational Plan of SPC

# Plans and actions in 2022

---

- Continuation of the net-Meetings
- Interesting and relevant content on the meetings
- More information on upcoming meetings and upfront agenda
  - Confluence has meeting list
- Material and recordings availability
- Encourage kick-offs of the smaller workgroups

# Plans for 2023

---

- Regular every 5 week meetings except the summer period
  - Kepe regularity on times
  - One longer relevant topic in every meeting
  - Regular updates from eDec and PoAcc communities
  - Updates from MC in every meeting
  - Agenda 4-5 days beforehand
- Encourage smaller activites
- Keep contact to local SP communities also emphasize the importance of SP cooperation

## Next Meeting

March 28, 2023, 09.00 CET

Activities in Operational office

# THANK YOU!
