

Motivation letter for position as “End User Community Leader”

My combined experience working on strategic, technical, and operational issues has given me the understanding of securing strong collaboration across business entities. Stakeholder management, communication and collaboration are key elements for success. I am an open, engaged, enthusiastic optimist with passion for driving improvement and standardisation for constantly improving communication. In Equinor we live and operate our business through the identified values Open Collaborative Courageous and Caring, I also see these traits in the OpenPeppol organisation.

In the period 2014-2017 I was a part of the Supplier Integration IT team contributing to the implementation of Peppol in Equinor. I have been working in Equinor as a procurement lead establishing contracts and managing suppliers since 2017. Equinor has a requirement in standard contracts for suppliers to use Peppol. The use of this requirement has enabled efficiency and growth among business entities, leading to value creation for all parties. In my role as procurement lead, I have seen the value of adopting to the interoperability network specifications and governance model to integrate our business processes using Peppol, reducing the need for manual intervention in daily operations.

Currently I am working with analytics and B2B integration, and in this role, I seek the opportunity to further strengthen the work for creation awareness of the benefits of continuously increased digitalisation across businesses.

Equinor has onboarded thousands of B2B suppliers using Peppol and the numbers are continuously growing. Having implemented Peppol Billing and Ordering business documents, the results so far for Equinor has exceeded even the most optimistic expectations from our management and the implementation team. We have realised huge business benefits from using Peppol as an enabler for more automation and leaner work processes.

As leader of the End User Community, I want to contribute to further development and growth of Peppol across private and public Supply Chain Processes. I want to inspire and encourage to a more active End User Community by inviting members to share experience and communicate need for other business documents.

My vision for EUC is to drive efficiency and growth among business and public sector entities around the world.
